Documentation library

Markdown is the editable source for project documents, which have generated PDF reading/printing editions. The lab deliverable templates are editable Word/Excel files with no PDF editions; task reports are Markdown only. The build guide explains the Windows rebuild command, validation, and source/PDF consistency rules.

1. Project documents

Table 1. Project documents

Document	Source	PDF
Project assignment specification	Markdown	PDF
Step-by-step lab implementation guide	Markdown	PDF
Architecture and design	Markdown	PDF
Security requirements	Markdown	PDF
Test plan	Markdown	PDF
Acceptance criteria	Markdown	PDF
Project final report template	Markdown	PDF
Decisions	Markdown	PDF
Risks	Markdown	PDF
Authoritative references	Markdown	PDF
Terminology and status	Markdown	PDF
Documentation build instructions	Markdown	PDF

The final project report remains a clearly identified template. All infrastructure is PLANNED and its operational controls are NOT TESTED. No PDF adds implementation, certification, or owner acceptance claims.

2. Editable lab deliverable templates

The assignment defines the five approved future T7 filenames. They are not yet created. T7 requires separate owner approval to reconcile the eight existing files below.

These are **legacy T5 blank shells**, byte-preserved in T6. Their old requirements, counts, rubric and stage prompts describe the retired baseline and do not govern current implementation. Do not use them as current answer sheets until approved T7 migration. Their original actual/evidence fields remain empty.

Table 2. Editable lab deliverable templates

Editable template	Historical requirements	Historical T5 purpose
01-Lab-Environment.xlsx	R02	Hardware, VMs, software, stage checklist and planned/actual resource ledger

Editable template	Historical requirements	Historical T5 purpose
02-Architecture-and-Network-Design.docx	R01, R03, R04, R15	Business roles, zones, diagrams, flows, threats, decisions and limitations
03-Identity-and-Access-Management.xlsx	R05, R06, R08	Synthetic identities, groups, permissions, authentication, privilege, endpoint baselines and revocation timing
04-Zero-Trust-Implementation.docx	R03, R04, R07, R09, R12, R13	Stage A-L configuration references, certificate lifecycle, sequential pilots, two automations and recovery procedures
05-Security-Monitoring.xlsx	R10	Log sources, twenty event timestamps, detections, investigations, coverage, clock offsets and retention sizing
06-Testing-and-Validation.xlsx	R01, R13, R14	All R01-R16 mappings and T00-T20 definitions, individual cases, actual results/evidence, recovery measurements, exceptions and separate owner UAT
07-Troubleshooting-and-Lessons.xlsx	R14, R15	Issues, impact, investigation, correction/rollback, verification and lessons
08-Final-Lab-Submission.docx	R11, R15, R16	Assessment, supporting-file references, measured-outcome summary, rubric, public hygiene and GitHub record

Run `python scripts/validate_office_templates.py` to inspect the unchanged legacy packages. Native Office/layout validation belongs to T5; T6 does not reopen, edit or regenerate these files. Keep future working records private.

3. Task reports and other instructions

The task-report index links the sequential Markdown-only reports and addenda. The entire `docs/reports/` directory, including its indexes, is excluded from PDF generation. Finalized Markdown remains immutable. Existing report PDFs are retained as historical archives and are not regenerated or required for later reports.

PDF editions also accompany the root project overview and agent governance, infrastructure guidance, configuration guidance, evidence handling, and bootstrap evidence. This library index is available as PDF too.

Compatibility pages under this directory preserve old decision/risk links and the relative links in relocated immutable reports. The aliases under `docs/docs/` and `docs/evidence/` point to maintained sources or unchanged evidence; they receive no PDFs. The manifest alias is a small JSON navigation record, not a duplicate manifest. The generated manifest lists every approved source/PDF pair and its content hashes.
