Configuration examples

Reserved for reviewed, sanitized policy and configuration examples produced in later approved stages. Task 001 includes no live configuration or ready-to-import firewall, directory, PKI, or remote-access policy.

Use synthetic users and symbolic destinations. Store actual addresses, tenant identifiers, private inventories, certificates, key material, firewall exports, and production details outside Git. Document the intended target, version, prerequisite, requirement/test IDs, and safe rollback for every future example. Follow AGENTS.md.
